

Science TEKS: 2.5.B

(5) Matter and energy. The student knows that matter has physical properties and those properties determine how it is described, classified, changed, and used. The student is expected to:

(B) compare changes in materials caused by heating and cooling;

Under the photo tabs, record your observations. Relate the state of matter observed in each to temperature. Infer what heat source caused the chocolate candy to melt. What other heat sources can melt chocolate?
